## 国内Agg和新契约差异

一、国内Agg DetailSearch契约与新契约之间的字段映射关系

- 二、字段改动情况
- 1、CreditCardTypeList: 生产无数据,前端也不再使用。该字段不再处理;如果以后有需要,让国内按标准code输出。
- 2、乘客限制信息ProductItemList→FlightProductItemList→ Restrictions
  - 年龄限制PassengerAgeLimit对应新契约DataLists→FlightProduct→PaxProduct→PaxRestriction→AgeLimitRange (Min &Max)
    - 年龄范围上限或下限为0时表示不限,例如:

      - 国内契约"PassengerAgeLimit":13-24,55 新契约 "AgeLimitRange": [{"Min": 13, "Max": 24}, {"Min": 55, "Max": 0}]
  - 人数限制MinPassengerNum &MaxPassengerNum对应新契约DataLists→FlightProduct→PaxProduct→PaxRestriction→PaxCountRange
- 3、税费TaxFee
  - 只输出OilFee+ Tax总价,输出在新契约的Tax(税费)
  - TaxFee的信息从Flight节点迁移到FlightProduct→PaxProduct→FlightPaxPrice→Tax
- 4、餐食MealInfo
  - ProductItemList→FlightProductItemList→MealInfo→DisplayType对应新契约DataLists→Transport→Flight→ Meal→ DisplayType
  - 移除除DisplayType的其余字段
  - 新契约的餐食根据舱等输出餐食的DisplayType
- 5、票台信息
  - 票台ID: ProductItemList→FlightProductItemList→ PolicyDetail→FlightAgencyCandidates对应新契约 DataLists→FlightProduct→FlightS upplier → Agency ID
  - 票台显示名称ProductItemList→FlightProductItemList→ProductDetail→DisplayName对应新契约DataLists→FlightProduct→FlightSupplier →OfficialName和IATANumber
- 6、行程单或发票选项FlightProductItemList→ ProductDetail→BillType 对应新契约 DataLists→FlightProduct→InvoiceType
- 7、产品组合类型TransferProduct→ProductCombinationTypeList对应新契约 Itinerary→ Offer→ProductCombinationType
- 8、行李额LuggageDetailInfo
  - ProductItemList→ FlightProductItemList→ ProductDetail→ LuggageDetailInfo对应新契约 Itinerary→ Offer→ BaggageRef→PaxBaggage →AgeTypeGroup(根据乘客类型对应)的节点下找到BaggageTypeRef
  - BaggageTypeRef索引到 DataLists→ Baggage→ RefNum
  - AgeTypeGroup: 1: Adult; 2: Child; 4: Infant;
  - Type: 0=托运; 1=手提
- 9、交通信息TransportList
- 航班信息节点TransportList→ FlightList 对应新契约DataLists → Transport→"Type":1
  - MarketingFlight 透传 TransportNo
  - MarketingAirline透传Flight→MarketingCarrierCode
  - OperatingFlight 透传Flight→OperatingFlightNo
  - DepartSiteInfo 对应DepartPoint
    - CityCode删除
    - CityID透传CityID
    - AirportCode透传AirportCode
    - TerminalID删除

- TerminalName透传TerminalName
- Time
- ArriveSiteInfo对应ArrivalPoint(节点同DepartPoint)
- AircraftType透传Flight→AircraftCode
- 经停节点TransportList→ FlightList→ StopsInfo 对应新契约DataLists→ Transport→ Flight→ Stop 经停节点只输出AirportCode、DurationMinutes、ArrivalDateTime3个字段,其余字段删除
- 火车
- 火车信息节点TransportList→ TrainList 对应新契约DataLists → Transport→"Type":2
  - Number透传TransportNo
  - TrainType透传Train → TrainType (1=普通火车TRAIN; 2=动车CRH; 3=高铁CHSR)
  - TimeCost透传DurationMinutes
  - Remark透传Train → Remark
  - DepartSiteInfo 对应 DepartPoint
    - CityCode删除
    - CityID透传CityID
    - Time透传DepartDateTime
    - StationID 删除
    - StationName透传StationName
    - StationType 删除
  - ArriveSiteInfo对应ArrivalPoint(节点同DepartPoint)
- 10、飞人节点TransportList→FlightList→FlyManType 对应新契约Itinerary→FlyingManType
- 11、准点率TransportList→FlightList→PunctualityInfo 对应新契约DataLists→Transport→Flight→Punctuality
- 12、最晚出票时限ProductItemList→ FlightProductItemList→ ProductDetail→ TicketDeadline 对应新契约DataLists→ FlightProduct→ TicketingT imeLimit
- 13、航班舱位可累积里程ProductItemList →FlightProductItemList →ProductDetail →MileageCredit对应新契约 Itinerary→
- 14、标准价TransportList→FlightList→StandardPolicyList 对应新契约DataLists→Transport→Flight→FlightReferencePrice→StandardPrice
- 15、儿童运价只输出1个,原ChildPolicy和IsChildBookAdult取低值(SalePrice+Tax),前端通过DataLists → FlightProduct → PaxProduct获取AgeType 为2的对应节点列表
- 16、婴儿运价 InfantPolicy, 前端通过DataLists → FlightProduct → PaxProduct获取AgeType为4的对应节点列表
- 17、按航司显示舱位、票面价政策来源的渠道标识ProductDetail→AirlineShowInfo对应新契约DataLists→FlightProduct→FlightProductReferencePrice → CarrierPriceShow
- 18、X产品
  - X产品倒查key: ProductItemList→ FlightXCompositionList→ FlightXProductList→ XToken对应新契约 DataLists→MarketingProduct→ServiceDefinition→ServiceToken
  - BundleItemList对应新契约Itinerary → Offer → OfferPackage → BundleItem → ProductRef, 按BundleType根据ProductRef索引到 DataLists → MarketingProduct对应类型下的RefNum
    - BundleType类型
      - X产品 FlightXComposition =>DataLists → MarketingProduct → ServiceDefinition
      - 返现CashBack =>DataLists → MarketingProduct → CashBack
      - 优惠券 CouponProduct=>DataLists → MarketingProduct → Coupon
      - 礼盒 GiftProduct=>DataLists → MarketingProduct → Gift
      - 酒店 Hotel =>DataLists → MarketingProduct → Hotel
      - 增值服务 Ancillaries =>DataLists → MarketingProduct → Ancillaries
      - 定投 MemberPrivilege => DataLists → MarketingProduct → MemberPrivilege
      - 立減 PriceReduction => DataLists → MarketingProduct → PriceReduction
      - 权益Ref BrandAttribute =>DataLists → MarketingProduct → BrandAttribute
    - 当有多个X产品时关联ServiceDefinitionRefs节点,索引到其他ServiceDefinition,可表示绑定关系
    - ProductItemList → FlightXComposition → RuleID对应新契约DataLists → MarketingProduct → ServiceDefinition → PolicyID
- 19、政策来源的渠道标识ProductItemList→ FlightProductItemList→ PolicyDetail→PolicySourceChannel 对应新契约 DataLists→FlightProduct→BookingChannel
- 20、ProductSourceNum 移除,前端通过ValidatingCarrier做相应判断
- 21、退改签反查key
  - ProductItemList→FlightProductItemList→PassBackInfo→RCKey 对应新契约Itinerary → Offer → ProductDetail→ CompatiblePenaltyKey
  - FlightPaxProduct. Tag. key=BookingAdultPolicyInd, Value=true 时,表示"儿童定成人政策"。虽然当前是儿童类型,但调用方要使用成人的退 改签!!!
  - PenaltyKey从Product层级提取到Offer层级,由退改签接口包掉。
  - 对PenaltyKey二次组合:原product下的PenaltyKey, AgeType, ReplaceCtripRule等(一期第二阶段的工作、目前penaltykey仍然放在productdetail 下)
- 22、推荐位
  - FeaturedFirstList下的RedirectRouteList为空时,从新契约Itinerary下输出,其中的RecommendedInd节点为true

  - FeaturedFirstList下的RedirectRouteList为空时,从新契约DataLists → FlightProduct → RecommendedType输出

    推荐类运价类型,默认0:普通运价; 1:推荐类运价; 2:普通运价+推荐类(既是普通又是推荐类,与前端展示有关

    FeaturedFirstList下的RedirectRouteList不为空时,从新契约RecommendItinerary下输出,
  - - FeaturedFirstType透传Type
    - RedirectRouteList对应RecommendItinerary
      - TransportType透传
      - DepartSite透传DepartSite

- ArriveSite透传ArrivalSite
- DepartTime透传DepartDateTime
- ArriveTime透传ArrivalDateTime
- TansportNumber透传TransportNo
- Price删除
- DepartCityID透传DepartCityID
- ArriveCityID透传ArrivalCityID
- DepartCity透传DepartSite
- ArriveCity透传ArrivalSite
- Priority 删除
- TotalPrice透传SalePrice
- NearbyTransportInfoList 对应Interchange
  - NearbyTransportType透传 InterchangeRoute → InterchangeStep → VehicleType (1: 火车, 2:出租车, 3:公交, 4: 地铁, 5:自驾)
  - NearbyDistance透传Distance
  - NearbyTime透传DurationMinutes
  - NearbyPrice透传Price
- 23、以下节点删除,通过OfferType下 TransportFareMappingType->TransportRef 与 ProductDetailType->ProductRef 寻找对应关系
  - $\bullet \ \, \mathsf{RouteList} \ \, {\color{red} \rightarrow} \mathsf{DirectRoute} \ \, {\color{red} \rightarrow} \mathsf{TransportProductList} \ \, {\color{red} \rightarrow} \mathsf{ProductIDRefList}$
  - $\bullet \ \, \mathsf{RouteList} \ \, {\color{blue} \rightarrow} \mathsf{TransferRouteList} \ \, {\color{blue} \rightarrow} \mathsf{ProductGroupList} \ \, {\color{blue} \rightarrow} \mathsf{SegmentProductUnitList} \ \, {\color{blue} \rightarrow} \mathsf{ProductIDRef}$
  - RouteList →TransferRouteList →ProductGroupList →TransferProductProperty →BundleItemList →ProductIDRef
  - $\bullet \ \, \mathsf{RouteGroupList} \ \, \boldsymbol{\to} \mathsf{RouteProductGroupList} \ \, \boldsymbol{\to} \mathsf{RouteList} \ \, \boldsymbol{\to} \mathsf{DirectProduct} \ \, \boldsymbol{\to} \mathsf{ProductIDRef}$
  - RouteGroupList →RouteProductGroupList →RouteList →TransferProduct →SegmentProductUnitList → ProductIDRef
  - RouteGroupList →RouteProductGroupList →RouteList →TransferProduct → TransferProductProperty →BundleItemList → ProductIDRef
  - RouteGroupList →RouteProductGroupList →RouteProductGroupProperty →BundleItemList →ProductIDRef
- 24、AdditionalInfoList不再输出,其中
  - Type=4的信息迁移到RobTicketInfo;
  - Type=6 升舱, Json迁移到FlightProductType→tags, key="UpgradeRulePolicy"; (FlightProductType包含成人类型时,才有此tag,因为升舱信息只针对成人。)
  - Type=8迁移到MembershipRegister;
  - Type=12迁移到ProductDetailPackage→BundleItem→CashBackInfo。
  - 其他Type都未输出:原因是经产品调研,是已下线或者无数据等情况,新接口的契约就不再支持它们了。
- 25、DetailSearch时输出的ResponseToken,对应到ResponseBodyType.CompatibleDetailToken
